TITLE: (suggested title in DeltaCad) “Table Maker 01”

DESCRIPTION:

This Macro converts a .CSV (database) file to a formatted Table listing, using text and lines, within a DeltaCAD drawing.

The maximum number of rows this macro can process, as written, is 250.

It is intended for easily adding cut lists, parts lists or any other formatted data lists to a drawing that have been created using a database program and then saved in a CSV file format.

Note: This file is considered to be a ‘Beta Version’ until further notice.
